NOTE 1: ROUTE AN ISOLATED GROUND TRACE FROM CCOMP_REF TO THE CAP GROUND, THEN VIA TO THE MAIN GROUND PLANE
NOTE 2: PLACE VDD_BUCK CAP AS CLOSE TO CHIP EDGE AS POSSIBLE AND MINIMIZE LOOP INDUCTANCE
NOTE 3: USE SHORT AND WIDE TRACES FOR BUCK AND FLYBACK RELATED NETS
NOTE 4: ANALOG MIC INPUTS SHOULD BE ISOLATED WITH GROUND FROM NOISY OR SWITCHING SIGNALS AND SUPPLIES

The image displays two detailed PCB layout diagrams for speaker amplifier (SPKR PA) and speaker amplifier 2 (SPKR PA2) sections of a circuit board. Both diagrams feature a central integrated circuit (U6001 for SPKR PA and U6005 for SPKR PA2) and show the placement of various components, including capacitors, inductors, and connectors.

SPKR PA Diagram (Left):

- IC:** U6001 (CS35L41B-CWZR/B2).
- Power Management:** VREG_S10B_1P8 (6.3V, 0201) and VPH_PWR (6.3V, 0402) are shown. Power is supplied to the IC via pins VA, VP, and A5.
- Signal Inputs:** SPKR_I2C_SCL, SPKR_I2C_SDA, SPKR_I2S_DIN, SPKR_I2S_DOUT, SPKR_I2S_WS, SPKR_I2S_BCK, SPKR_INT, and SMART_PA_1_EN are connected to the IC pins.
- Output Stage:** The IC has two output channels (OUT+ and OUT-) connected to SPKR1_SNS_N, SPKR1_SNS_P, SPKR1_OUT_P, and SPKR1_OUT_N. The output is filtered by L6001 (1.0uH, 2016) and L6003 (260ohm, 0603).
- Other Components:** Various capacitors (C6038, C6009, C6011, C6012, C6013, C6015, C6016, C6040, C6049) and inductors (L6001, L6002, L6003) are placed around the IC.

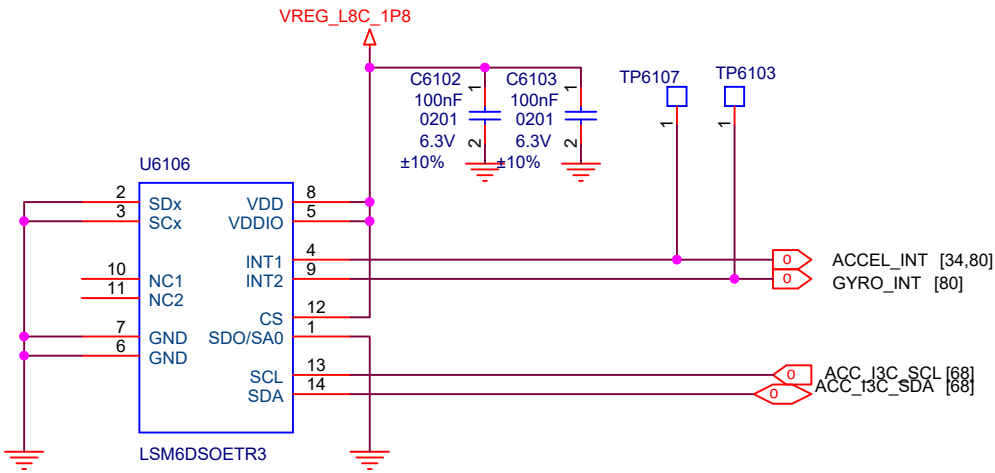

SPKR PA2 Diagram (Right):

- IC:** U6005 (CS35L41B-CWZR/B2).
- Power Management:** VREG_S10B_1P8 (6.3V, 0201) and VPH_PWR (6.3V, 0402) are shown. Power is supplied to the IC via pins VA, VP, and A5.
- Signal Inputs:** SPKR_I2C_SCL, SPKR_I2C_SDA, SPKR_I2S_DIN, SPKR_I2S_DOUT, SPKR_I2S_WS, SPKR_I2S_BCK, AUXSPKR_INT, and SMART_PA_1_EN are connected to the IC pins.
- Output Stage:** The IC has two output channels (OUT+ and OUT-) connected to SPKR2_SNS_N, SPKR2_SNS_P, SPKR2_OUT_P, and SPKR2_OUT_N. The output is filtered by L6004 (1.0uH, 2016) and L6006 (260ohm, 0603).
- Other Components:** Various capacitors (C6017, C6009, C6011, C6023, C6024, C6025, C6026, C6020, C6018, C6064, C6067) and inductors (L6004, L6005, L6006) are placed around the IC.

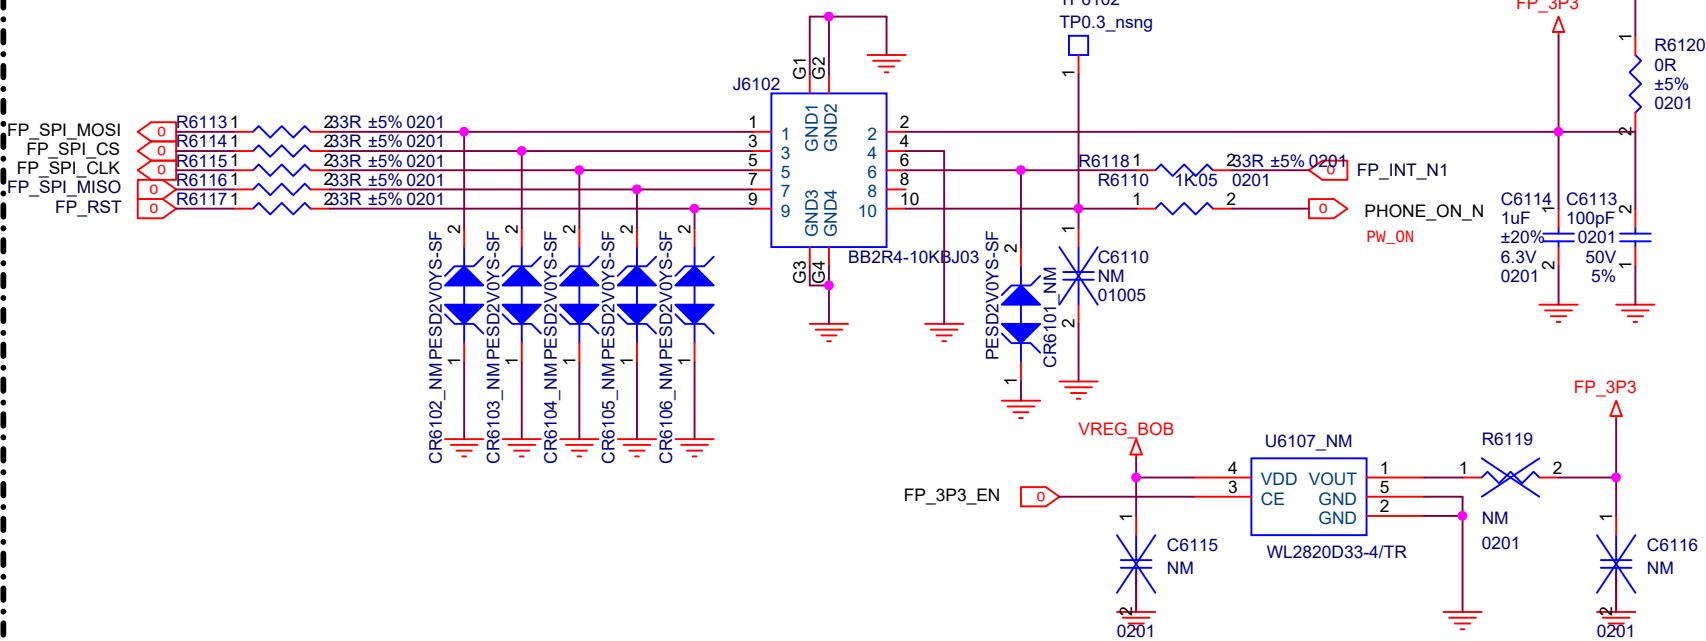

The schematic diagram illustrates the REVERSE MIC and TOP MIC sections of the PCB layout. The REVERSE MIC section (left) features two microphone inputs, J6005 and J6006, both labeled XM-217-XC-167-SP. These inputs are connected to a network of resistors (R6065, R6066, 100RR6002, 100RR6001) and capacitors (C6063, C6059) leading to the SPKR1_SNS_N, SPKR1_SNS_P, SPKR1_OUT_N, and SPKR1_OUT_P pins. The TOP MIC section (right) includes a microphone input WCD_MIC_BIAS4 connected to a network of capacitors (C6030, C6031, C6032), resistors (R6024, R6025, R6069), and an inductor (L6007). This section also includes a microphone amplifier U6002 (S150B381-050) with VDD and GND pins, and output pins CDC_MIC5_P and CDC_MIC5_N. The diagram is divided into four horizontal sections by a vertical line, with labels 5, 4, 3, and 2 at the bottom.

The schematic diagram illustrates the signal path for the CDC_MICS_P and CDC_MICS_N outputs. The input signal WCD_MIC_BIAS4 is connected to a network of capacitors (C6030, C6031, C6032) and resistors (R6024, R6069, R6025). The signal path includes a U6002 S150B381-050 component, which is connected to the CDC_MICS_P and CDC_MICS_N outputs. The circuit is designed to filter and condition the input signal before it reaches the outputs.
