The schematic diagram illustrates the RF front end of the R9307 module. It shows the signal path from the ANT1 connector through a matching network (C0334, C0335, C0336) to the R9307 chip. The chip has two near-test points, R9301 and R9304, which are connected to the matching network. The output of the chip is connected to the L0319 connector. The diagram also shows the internal components of the R9307 chip, including the R9301 and R9304 near-test points, and the R9307 chip itself. The diagram is divided into three sections by vertical red lines, representing different functional blocks or test points.

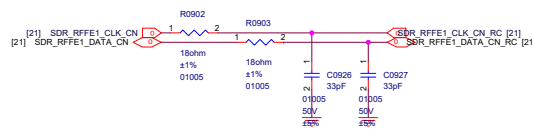

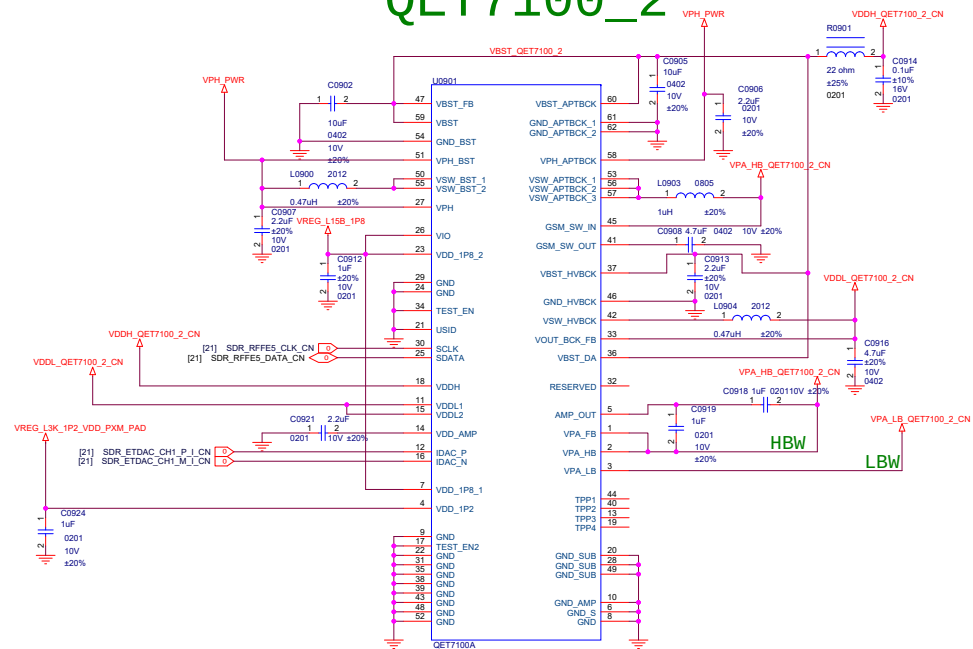

Figure 1 shows the schematic diagram of the RF front end of the R8395 near-field test board. The circuit includes a CHAN1_RQ_CHECK input, an ANT18 antenna, a matching network with capacitors C0202, C0208, and C0209, a balun transformer T0101, a 1:1 transformer T0102, and a 50 Ohm load. The board is labeled R8395 靠近测试板 J0319.
