Mid/High Band

The schematic diagram illustrates the internal circuitry of the CS-111A. It begins with an antenna input (ANT1000 CS-111A) connected to a matching network consisting of capacitors C1137 (4.70nF) and C1138 (330pF), and inductors L3040 (250pF) and L3032 (2.0nH). This network is followed by a BC107C NPN transistor in a common-emitter configuration, with a 22kΩ base resistor, a 100kΩ collector resistor, and a 2.2V emitter resistor. The output of this stage is connected to a second matching network (L3024 200nH, C1131 330pF) and then to a VRS1000 variable resistor. The signal then passes through a WESP3200.051 component and an L3023 inductor to the U1008 QM1114 IC. The IC is configured with a 3.9kΩ resistor at the 3.9kΩ pin, a 1.0kΩ resistor at the 1.0kΩ pin, and a 100kΩ resistor at the 100kΩ pin. The IC's output (pin 1) is connected to a 3.9kΩ resistor and a C1133 capacitor (100pF). The output of the IC is then connected to a VRF FEM 2PB component, which is also connected to a 1.0kΩ resistor and a 1.0kΩ capacitor. The final output is connected to an ANT1000 CS-111A antenna.
